

PRACTITIONER FEEDBACK

“....biotechnology creates a better informed patient, and affords greater compliance, better clinical results, and patient satisfaction. This tool leads to greater patient retention, and referral of family, friends, and neighbors while adding yet another revenue center to the practice through clinical assessments, and added dispensary,” explained Dr. Lewis N. Meltz of Chiropractic Orthopedic Group in El Dorado Hills, CA.

Dr. Kenneth R Hoffman from the Sophia Natural Health Center in Brookfield, CT explained one of the reasons this technology has helped his practice to grow. “It gives us a unique technology that stands out from other holistic medical practices. It allows us to offer a service that appeals to our patients by giving them some dynamic feedback on their health status,” he said.

“....technology has helped those patients who seek science-backed information, but cannot always afford the more expensive laboratory workups. It provides a much more affordable way to understand the needs of the body,” said Dr. Kim K. Chai from the Back and Neck Clinic in Sapulpa, which is near Tulsa, OK.

Dr. Tamara Santa Ana of ProActive Health Solutions and Chiropractic in Lexington, VA agreed with Chai. “....technology has advanced my ability to work with individual patients to an extent that is absolutely awe-inspiring. I can tell very quickly which areas of concern we need to look at, and many times I have discovered areas of developing concern that the patient was not yet aware of.”
